

FUND OBJECTIVE

The Global X Cybersecurity ETF (BUG) seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Indxx Cybersecurity Index.

For informational purposes only. This document should be used to highlight some of the criteria to be used by index provider when publishing index constituents and is not comprehensive.

KEY FEATURES

High Growth Potential

Long-Term, Global Challenge

Unconstrained Approach

INDXX CYBERSECURITY INDEX

SELECTION

- In order to qualify for inclusion in the index, a company must derive revenue greater than or equal to 50% of its revenues from cybersecurity activities.
- Cybersecurity activities comprise the development and management of security protocols preventing intrusion and attacks to systems, networks, applications, computers, and mobile devices.
- The top cybersecurity companies, up to 40, ranked by market capitalization, will form the final index (if there are fewer than 40 cybersecurity companies that meet the criteria, all are included).

SELECTION POOL

- Eligible companies must have:
 - Minimum market capitalization of \$200M;
 - Primary listing in a Developed or Emerging Market (excluding India and Taiwan).
 - Average daily turnover of at least \$2M over the last 6 months (or over the last 3 months, if a recent IPO).
 - Free float percentage of total shares outstanding of at least 10% or a minimum free float market capitalization of USD 1 billion.
- Existing constituents are retained in the index if they retain a minimum market capitalization of \$80M and a minimum average daily turnover of \$1.2M (and continue to meet the listing and free float requirements).
- In case a security does not have a trading history of 6 months, to be considered for inclusion, significant IPOs must have been listed at least 10 calendar days prior to the 'Selection Date', and 3 months for other IPOs.
- An IPO is considered to be a "Significant IPO" if its company level total market capitalization is greater than the company level total market capitalization of at least 50% of the on-going index constituents as of previous 'Reconstitution Selection Day'.

WEIGHTING SCHEME

- Index components are weighted according to security-level market capitalization with the following constraints applied at each semi-annual rebalance:
 - Each component is subject to maximum weight of 6% and minimum weight of 0.3%.
 - The aggregate weight of companies with weight above 5% cannot exceed 40% of the index weight. The remaining companies are capped at 4.5%.

REBALANCES/REVIEWS

- The index follows a semi-annual reconstitution schedule. Adjustments are made on the second Friday in May and November each year.

For more information on the Index, please visit Indxx's website.

For the complete and current index methodology please refer to the index provider's website. This summary document is accurate as of the time of its publication and Global X does not guarantee that it is current at any point thereafter.

The selection of the index constituents and their weighting is made by the index provider at its sole discretion.

Carefully consider the fund's investment objectives, risks, and charges and expenses before investing. This and other information can be found in the fund's full or summary prospectus, which may be obtained by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Cybersecurity Companies are subject to risks associated with additional regulatory oversight with regard to privacy/cybersecurity concerns. Declining or fluctuating subscription renewal rates for products/services or the loss or impairment of intellectual property rights could adversely affect profits. The investable universe of companies in which BUG may invest may be limited. The Fund invests in securities of companies engaged in Information Technology, which can be affected by rapid product obsolescence and intense industry competition. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. BUG is non-diversified.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
